Project Name	Food Ordering Behaviour & Customer Trends: A Structured Analysis of Choices and Habits
Phase	Project Development Phase

Project Development Phase — Document 2

Dashboard Screenshot, Story Screenshot & Tableau Public Links 1. Dashboard

The published dashboard — titled "Cuisine Demand & Order Trends Analysis Dashboard" — brings together KPI cards (Delivery Fee, Order Value, Avg. Rating Given, Order Count), a City x Cuisine heat-map table, Order Distribution by Age Group & Restaurant Type, Company Type x Meal Type orders, Rating by Meal Type, Revenue Contribution by Meal Type, Cuisine Preference Distribution, Top 5 Cities by Order Volume, and Delivery Time Distribution — all cross-filterable via the City, Cuisine and Meal Type parameter controls in the top-right corner.

Figure 1: Published Dashboard — Cuisine Demand & Order Trends Analysis Dashboard

Reading the Dashboard: Key Figures

- Total Orders: 50,000 | Total Order Value: ₹27.39M | Total Delivery Fee collected: ₹29,82,136 | Average Rating Given: 3.0 / 5
- Mumbai leads order volume at 8,443 orders, followed closely by Pune (8,354), Bangalore (8,353), Delhi (8,309) and Chandigarh (8,279) — demand is spread evenly rather than concentrated in one city.

- Cuisine preference is almost perfectly balanced: Desserts (16.90%), Fast Food (16.74%), South Indian and Biryani (16.60% each), with Chinese and North Indian close behind.
- Revenue by meal type is tightly clustered — Breakfast (₹11.44L), Dinner (₹11.41L), Snacks (₹11.22L), Lunch (₹11.19L) — no single meal occasion dominates revenue.
- Delivery/order time is fairly uniform across bins (~7,000-7,200 orders per bin from 1.77 to 12.39 minutes), with a smaller 3,531-order bin at the 0.00 mark.
- Company type breakdown shows Friends (67,117) generating the highest combined order value for Dinner, ahead of Partner (51,737), Family (45,533) and Alone (41,605).

2. Story

The published workbook contains a storyboard titled "food ordering behaviour" which sequences the dashboard's panels into a guided narrative — starting from the overall KPI summary, moving through regional (city) and cuisine preferences, then into meal-type revenue and rating analysis, and closing with delivery-time distribution.
