

Performance Testing Phase

Project Performance Test

Date	30 Jun 2026
Team ID	
Project Name	Food Ordering Behaviour & Customer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	4 Marks

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Total Records: 50,000 order records Total Fields: 19 columns — order_id, user_id, age, city, order_time, day_type, cuisine, meal_type, restaurant_type, order_value, discount_applied, delivery_fee, time_taken_to_order, rating_given, is_repeat_order, mood, hunger_level, company, rainy_weather Load Time: < 3 seconds in Tableau Hyper Extract Verification: All 50,000 rows rendered correctly across all 9 worksheets without truncation
2.	Data Preprocessing	Validated schema and data types; checked for nulls/duplicates — 0 found in either case Created derived field: Age Group — IF [age]<=24 THEN '18-24' ELSEIF [age]<=31 THEN '25-31' ELSEIF [age]<=38 THEN '32-38' ELSE '39-44' END Created derived field: Revenue = SUM([order_value]) Created derived field: Repeat Order Flag — SUM(IF [is_repeat_order]='Yes' THEN 1 ELSE 0 END) Standardised city, cuisine and meal_type values for consistent grouping
3.	Utilization of Filters	Total Filters: 5 • Filter 1 — City: Dropdown quick filter updating all city-dependent worksheets • Filter 2 — Cuisine: Dropdown filter for all 6 cuisine types • Filter 3 — Meal Type: Dropdown filter (Breakfast / Lunch / Dinner / Snacks) • Filter 4 — Day Type: Weekday / Weekend toggle filter • Filter 5 — Restaurant Type: Budget / Mid-range / Premium filter • Dashboard actions: cross-filter between KPI cards and all charts
4.	Calculation Fields Used	Total Revenue = SUM([order_value]) Avg Order Value = AVG([order_value]) Repeat Order Rate = SUM(IF [is_repeat_order]='Yes' THEN 1 ELSE 0 END) / COUNT([order_id]) Age Group = IF [age]<=24 THEN '18-24' ELSEIF [age]<=31 THEN '25-31' ELSEIF [age]<=38 THEN '32-38' ELSE '39-44' END Revenue per Meal Type = SUM([order_value]) used for Revenue Contribution by Meal Type chart
5.	Dashboard Design	No of Visualizations / Graphs — 9 • KPI Summary Table (Orders, Revenue, Avg Rating) • Flavors Across Cities city vs cuisine heatmap

- Order Distribution by Age Group & Restaurant Type — stacked bar
- Distribution of Customer Preferences Across Cuisines — pie chart
- Orders by Company Type & Meal Type — grouped bar
- Customer Rating Analysis by Meal Type — bar chart
- Cities by Order Volume — bar chart (Mumbai 8,443 / Pune 8,354 / Bangalore 8,353 / Delhi 8,309 / Chandigarh 8,279)
- Revenue Contribution by Meal Type — bar chart (Breakfast 1,144,400 / Dinner ₹ 1,141,029 / Snacks 1,121,528 / Lunch ₹ ₹1,118,669)
- Distribution of Delivery Time Across Orders — histogram

6. Story Design

No of Story Scenes — 1 Storyboard ("food ordering behaviour")

The storyboard sequences the dashboard into a guided narrative for stakeholders — walking through city demand, cuisine mix, meal timing, delivery performance and revenue trends in a logical flow that non-technical viewers can follow without assistance.

Story guides: Business Analysts → identify high-performing city/cuisine combinations | Operations Managers → spot delivery delay bottlenecks | Restaurant Partners → plan menu and staffing by meal type
